

Abstract:

[PROBLEMS]

To provide a catheter package capable of containing a plurality of medical devices and an angiography catheter used for one catheter procedure without increasing the size thereof.

[MEANS FOR SOLVING PROBLEMS]

This catheter package (1) packages the catheter (100) having a catheter body with a metal reinforcement member embedded in a tube wall and a connector part fixed to the proximal portion of the catheter body. The catheter package is characterized in that the distal part of the catheter (100) of 10 to 50 cm in length is held in a natural state, the remaining proximal part of the catheter (100) is held in a curled state with a diameter of 10 to 50 cm.
